

I would like you to answer the following questions in a short answer format using Markdown.

Turn all of the questions below into headers.

If the questions are related, make the headers reflect this by subordinating them.

1. For questions that ask for a list, use the appropriate Markdown syntax to create either ordered or unordered lists.
2. Use **bold** and *italic* text for emphasis in your responses.

GitHub Username: chrissb8 Team name: Dogwood Today's date: 7-6-2016

What tools have you we worked with so far in this class?

- Codeanywhere
- GitHub
- Git
- Jekyll
- Pandoc
- HTML
- CSS
- Markdown
- VIM
- Probably others that I am missing

Which have you found most potentially useful?

GitHub

Why?

GitHub could be useful for *any* project that requires group work

What tools have been the most difficult to learn?

1. Using commands in codeanywhere
2. CSS
3. Jekyll

Why have they been particularly difficult to learn and use?

1. It is **easy** to make a typo or mistake somewhere and not notice it
2. It is complicated
3. It is *really* complicated

What tools would you like to learn more about?

- Codeanywhere
 - GitHub
-

When you are finished with the questions in file:

1. I want you to change the name of the file to your GitHub username.
2. You will then work as a group to convert the file to HTML, DOCX, and ODT formats, per the instructions in class.
3. Then I want you to add, commit, and push your changes.
4. Finally, you will create a pull request in GitHub to get these files back into my original repository.
